- H2020 GERONIMO - <https://www.geronimo-h2020.eu/project>

WP1 will specifically focus on the genetics and epigenetics underpinning efficient livestock production (ELP) traits. WP2 will elucidate the impact of environmental effects and selection on epigenetic variation. In WP3 the focus will be on the management of biodiversity by using phenotypic, genetic and epigenetic information.

These three work packages will provide valuable input for WP4 and WP5. WP4 aims at developing and validating innovative methods to improve selection strategies integrating environmental and non-genetic inherited factors, including epigenetic profiles, for ELP traits in chicken and pig. In WP5 the societal and ethical challenges that the use of genomic innovations in animal production rises will be addressed using an integrated approach.

1st SAB meeting on 14th January 2022
